

Congratulations
on your new baby!

Before you know it, your baby will be touching and tasting things as they explore the world around them.

Keep your child safe with these tips from the Oregon Poison Center

- Store potential poisons like medicine, chemicals, batteries, alcohol, marijuana, vapes and drugs up and away and out of reach and sight of children. Locked up is best.
- Use child resistant caps and containers. Replace the cap every time.
- Identify a safe place in your home for visitors to store purses, bags & suitcases which may contain medicine or other potential poisons.

Call the Poison Help® line (**1-800-222-1222**) if you have a poison emergency or have questions about potential poisons or poison information. Fast, free, expert advice from our nurses and pharmacists is available 24/7.
